

# WHY Switch to CANISTER VACUUMS?

## Save Money

### NaceCare Canisters

- ✓ No belts or brush rolls to replace
- ✓ Fewer parts = less costly repairs
- ✓ "Plug & Play" cord= replace cord with a simple screwdriver. No costly service call or downtime on machine
- ✓ Larger capacity (1.6 or 2 gallon models) means fewer bags
- ✓ Vacuum lasts twice as long as uprights- backed by 5-year motor warranty

- ✓ More than 2X the productivity of an upright- cleans 6,000 sq. ft/hr
- ✓ True Multi-Surface Vacuum - carpet, hard floors, tile, LVT etc. = no need for brooms & dustpans
- ✓ Clean under & around furniture rather than moving it

- ✓ True Hepa filtration improves air quality and reduces surface dusting
- ✓ Hair and sand are not an issue for a canister

- ✓ Wand is great for detail cleaning of vents, baseboards, & surfaces
- ✓ Quieter and less noise pollution - only 47dB(A)

### Upright Vacuums

- ✗ Belts & brush rolls must be replaced
- ✗ Twice as many parts as a canister
- ✗ Technician required to change cord-\$65+/cord and extra machine required to use during downtime
- ✗ 1 gallon bags need changed more often = more \$ for bags
- ✗ 3 year maximum motor life- most models 1-2 years

## Clean Faster

- ✗ Low productivity- only cleans approx. 2800 sq. ft/hr
- ✗ Uprights can only handle carpet not hard floors, tile, LVT etc.
- ✗ Difficult to move around and under furniture

## Clean Better

- ✗ Brush roll causes debris to be thrown into the air
- ✗ Hair wraps around the brush roll and stops it from rotating & sand is difficult to pick up and abrasive to brushes and belts
- ✗ Limited hose reach for above floor
- ✗ Disruptive with average upright being 65dB(A) or louder

## More Sustainable

High Efficiency motors use 40% less energy without sacrificing performance

Designed to be durable, long-lasting and easily repairable- keeping equipment in use and out of landfill
