

Liquid Snow Shovel
2.5 Gallon

Save 50% on your current budget when you switch to Liquid Snow Shovel (LSS). Its residual effects handles more than one snow event, so you only have to apply once a week.

No waste with LSS. You lose 40% of the treated or premium rock salt product due to bounce and scatter when applying and it getting shoveled or plowed away.

LSS is pet friendly as well as environmentally friendly. No more salt pellets getting stuck in the pads of your pet's paws, causing them to be injured. Also, LSS will actually promote vegetation growth when applied correctly and is not harmful to landscaping.

Other de-icing liquids come in different colors and can be foul smelling. Some of those liquids may actually contain urea, beet juice, de-sugared molasses, or corn derivatives - all ingredients that are not as effective, or clean and odorless like LSS.

Generic brines are pumped out of the ground and contain inconsistent chloride levels as well as other unwanted/ineffective minerals and ingredients. LSS is an engineered product with the right consistent chloride levels.

Since LSS is clear and odorless, you won't have to be concerned with stained carpets from dirty liquids or foul smelling odors.

A 4'x4'x4' tote of LSS is small, effective, and equivalent to 14 pallets of treated salt (14 skids of 50-lbs bags). Save space, time, and money by not having to maintain a large salt supply.

LSS melts to -25°F and will not deteriorate concrete.
