

Powermat Network Management System

All of the Powermat Charging Spots in a venue are part of a IoT network using a Gateway to the cloud. Web-based software manages performance, monitoring and enables remote system upgrades.

The Powermat Network Management cloud-based software centrally controls a venue's Charging Spots. An easy-to-use dashboard allows venue managers to monitor the network's performance. It also permits personnel to activate campaigns, track customer usage and analyze trends.

FUTURE-PROOF

Over the Air updates, providing future upgrades to support new features and functionalities

TRACKING AND ANALYTICS

Dashboards to track performance, usage and statistics

CUSTOMER ENGAGEMENT MANAGEMENT

Venue tool to manage app promotions and user content
