

The Henry Luce Foundation – New York, NY

This esteemed Foundation, established more than 75 years ago by Henry R. Luce (co-founder and editor-in-chief of Time, Inc.), has been an on-going client of BGA since 1997. For this project, BGA assisted them with their site evaluation and relocation to a Tower Floor of the 1926 Landmark, New York Life Building.

- A design that captures the feel of the 'cathedral inspired' motif of this landmark building, with a nod to the 'Mission Style', evoking the Luce family's roots as missionaries in Asia
- A lighting scheme based on a mix of pendant + wall mounted indirect and decorative light fixtures. These fixtures showcase the high ceilings and arched 'cathedral-like' window heads, while providing a distinctive, energy-efficient lighting solution
- The design of a secondary Conference Room, adjacent to the Board Room and the nearby Servery + Pantry, and separated by sliding wood doors to allow for its use as a Food Banquet space during special events
