

Metropolitan Lithotripsy Surgery Facility, Queens, NY

This division of Allied Urological Services operates a number of Ambulatory Surgery Facilities in the Metro New York City area. For the new 6,500 S.F., Queens, NY Outpatient facility, we developed this Surgery Center for the treatment of Urological conditions. Project features:

- The two-level space was organized around (3) Procedure Rooms, each with specialized equipment, plus a separate Ambulance delivery zone
- The large Lithotripsy and Cystoscopy machines required structural reinforcement, acoustical isolation and lead lining of the walls, floors and ceilings
- The Program requirements included Patient Check-In, Interview, Patient Pre-Op, Changing Rooms with Lockers, Nurses' Station, X-Ray + Dark Room and a Recovery Room
- A functional and efficient layout to be managed by a small team of medical professionals. The central desk allows the Nursing staff to monitor both incoming and recovering patients from one location
- The design and finishes selected are residential in nature, to put the Patients and their families at ease
