

O&M (OPERATION/MAINTENANCE) AND SAMPLING

MES's sampling and O&M division provides service to over 200 contaminated sites throughout New York, Delaware, Pennsylvania, and Connecticut. Our group is staffed with highly skilled and qualified professionals with backgrounds in Environmental Science, Geology, and Construction. Our field staff use advanced equipment and technologies to complete the task at hand, which includes pumps, interface probes, and water quality meters.

All scheduling and data sharing is done through our online portal. Clients know when sites are being sampled, by what technician, and for what parameters. In addition, MES holds certification from the State of NJ as a Certified Environmental Laboratory for low flow sampling, and each of our field and office staff hold certifications from OSHA and other professional organizations and training.
