

MATH WORKSHOP

(GRADES K-5)

DESCRIPTION

Tired of the “one size fits all” approach to math instruction? Transform your classroom with Math Workshop, the balanced, student-centered approach to learning characterized by daily routines and centers. Math workshop provides an effective environment for developing lifelong mathematical reasoning skills. Participants will learn the key elements of an effective math lesson, the importance of daily use of manipulatives, and how to integrate game-based learning into current instructional practices. The result is instructional time that is focused, engaging, and full of opportunities for practical application of skills being taught. Participants will also leave with a variety of math games that can be easily differentiated and support the Common Core State Standards.

WHO

- K-5th grade teachers
- math interventionists
- special education teachers
- administrators

WHEN

March 18, 2021

8:30am-3:30pm

COST

\$265/teacher

SCECHs offered through
Eastern Michigan University

MOLDING MATH MINDSETS

Molding Math Mindsets (M3) helps teachers transition from a “one-size-fits-all” math instructional model to a hands-on, interactive workshop model that is firmly rooted in the Common Core Standards and the 8 Math Practice Standards.

We help teachers gain confidence in their instruction by helping them appreciate the importance of numeracy development and the stages of mathematical thinking and application. Our strategies and solutions are practical and can be immediately implemented into classrooms for student success.

MEET SHANNON

Shannon Samulski-McCartney is the founder of Strategic Intervention Solutions and an international educational consultant & author.

She has over 15 years of teaching experience and is well known for her practical information and contagious enthusiasm! She is a dynamic presenter, the creator of the My Counting Buddy math manipulative, Deck o' Dots, Math Might, as well as the author of several other classroom resources.
