

NUMERACY DEVELOPMENT

WITH NUMERACY TALKS (GRADES K-2)

DESCRIPTION

Once your students have memorized the 10 frame and can subitize like rockstars in one modality, what happens when you show 10 in a scatter or on the top row of a Rekenrek? If they go back to one-to-one counting, this workshop is for you! Join Shannon as she helps you change the way you think about numeracy development with young children. This foundational workshop will equip you to support your students as they learn to understand and explain their own thought processes, implement numeracy chats in the classroom, and discover fun numeracy games and activities that can be implemented tomorrow!

WHO

- K-2nd grade teachers
- math interventionists
- special education teachers

WHEN

October 1, 2020

8:30am-3:30pm

COST

\$265/teacher

SCECHs offered through
Eastern Michigan University

MOLDING MATH MINDSETS

Molding Math Mindsets helps teachers transition from a “one-size-fits-all” math instructional model to a hands-on, interactive workshop model that is firmly rooted in the Common Core Standards and the 8 Math Practice Standards.

We help teachers gain confidence in their instruction by helping them appreciate the importance of numeracy development and the stages of mathematical thinking and application. Our strategies and solutions are practical and can be immediately implemented into classrooms for student success.

MEET SHANNON

Shannon Samulski-McCartney is the founder of Strategic Intervention Solutions and an international educational consultant & author.

She has over 15 years of teaching experience and is well known for her practical information and contagious enthusiasm! She is a dynamic presenter, the creator of the My Counting Buddy math manipulative, Deck o’ Dots, Math Might, as well as the author of several other classroom resources.
