

A LETTER FROM THE C.E.O.

Dear Valued Students

Gauge Training Inc is very pleased to be kicking off our technical training program with the commencement of our first scheduled classes this September. Our initial training program is scheduled for Sep-Oct-Nov of this year before full time classes in multiple locations begins in January of 2010. Thank you for being a part of our early programs where we will refine and improve our class programs with you valuable feedback and comments.

Gauge Training Inc is proud to be the very first API approved provider of focused, in-depth training in the proper use of thread gauging equipment and the proper measurement of thread forms for tubing, casing and rotary shoulder applications. Our “hands on” training programs, conducted by certified instructors are designed to familiarize new as well as experienced technicians and prepare them to provide accurate, reliable services to their companies and customers through the energy sector.

The proper and successful gauging of threads will reduce production waste, improve material yields, improve the bottom line for threading fabricators and improve the abilities of inspection companies. Additionally, accurate gauging will contribute to a safe work environment, help prevent dangerous leaks and enhance the speed and efficiency of make-up break-out activities. Finally this advanced educational experience will improve the individual’s technical capabilities and certify them to a new standard of excellence.

Thank you again for your commitment to quality and to improving your capabilities for job performance. We are proud to provide this unique educational experience and hope you enjoy your time spent with our excellent team at Gauge Training Inc.

Best regards

Sean O'Boyle
Chief Executive Officer
