

FREQUENTLY ASKED QUESTIONS

SOLUTION
HEPA CONTAINMENT & ACCESS

HOW IS IT A COST EFFECTIVE SOLUTION?

Our models improve field productivity and save labor costs. The cutting-edge design requires just one person to move and operate the unit, allowing more time to perform critical work while reducing man hours on site.

FASTEST SET UP WITH ONE-STEP LIFT & LOCK™

No other cart on the market is ready to use faster than a Solution Containment unit. Simply roll it into place, lock the wheels, and raise the tent in one swift move.

WHAT ABOUT AIR QUALITY AND SAFETY?

Infection control is our #1 priority. Our HEPA filtration system is DOP tested to perform at an efficiency of 99.97% filtering all mono-dispersed particulates 0.3 microns or larger, keeping pathogens and dust fully contained.

WHAT MAKES IT UNIQUE?

Our innovative design delivers best-in-class functionality - and our proprietary ONE-STEP LIFT & LOCK™ mechanism means better efficiency. Top-tier filtration generates the specific negative air pressure required to mitigate harmful airborne particulates, capturing dust and debris to ensure safer air quality. The sleek design easily fits through corridors and elevators, providing a slim, easy-clean, unobtrusive profile.

DO I NEED A HEPA10 OR HEPA13?

This depends largely on the facility where the unit will be used. Do you have taller than 10' ceilings? The HEPA13 reaches up to 13' ceiling heights. Do you want a clear viewing panel on one or both sides? The HEPA10 has solutions for variable access. Still can't decide? We offer incentives for quantity purchases - with both units, you're covered for all possibilities.

WALLS AND NON-MARKING WHEELS

The 360° rotating casters are made of a hard rubber material that won't scuff or leave black marks on floors. The unit's streamlined profile has no protuberances to scratch walls or to catch on passersby.

WHAT SIZE LADDERS FIT INSIDE A SOLUTION?

The HEPA10 can fit a 6 ft. ladder fully extended. The HEPA13 can accommodate a 6, 8 or 10 ft. ladder. Both models can be locked with a folded ladder stored inside.

WHAT EXTRA PARTS ARE REQUIRED?

Units arrive fully assembled with everything necessary to use the system - just attach the telescoping tent the first time. That said, we do sell extra parts if you want spares on hand.

WHERE AND HOW IS IT DELIVERED?

We ship anywhere in the contiguous 48 states. Our units are locked, covered, and loaded in specially-constructed crates, and then shipped via an air-ride trucking service to ensure they arrive in perfect working order, ready to be unpacked and go to work.

All Solution Containment units are proudly fabricated in the United States.

DURABILITY: HOW LONG DOES THE HEPA10/HEPA13 LAST?

Solution Containment units are built to last a long time. The carbon steel, hard-sided construction withstands the rigors of the work environment - many of our units are still in the field 10+ years after purchase, providing long-term functionality and ROI.
