

Actionable Intelligence To Improve Care And Lower Cost

Increasing demands on healthcare providers to improve clinical outcomes and patient experiences while optimizing cost of care require the adoption of solutions that go beyond the EHR.

SensER provides next-generation advanced analytics to deliver actionable intelligence for ER leaders. Real-time alerts and predictive models enable highly effective means to measure and improve physician, site, and practice performance, while simultaneously improving patient experience.

Solution Mission

As healthcare shifts towards value-based reimbursement, there is a need for a holistic mechanism to measure physicians' performance, including their quality and cost efficiency. SensER provides a way for physicians to reduce complications and achieve sustainable improvements in their performance, by drawing on multiple data-sets in innovative wa SensER aggregates data from multiple transaction systems – revenue cycle management, the hospital's transaction system, physicians' calendar and patient data, and other available sources, to derive critical Key Performance Indicators (KPIs) and creates analytical models. Such deep and detailed analysis of the organizational performance helps physicians improve the overall quality and cost of delivering care.

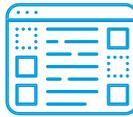

How does it work?

Direct data feed connected to hospital IT systems such as healthcare records and accounts payable statements.

Systematic and automatic comparison of physicians' performance against that of their peers using objective and reliable indicators.

Built-in algorithms automatically highlight problem areas, based on appointment dates, patient volume, complexity of treatment, and physician's history.

System collates all financial information, such as the physician's relative value units (RVU), the amount receivable and similar parameters.

Processed data is available on a dashboard under three broad categories: Provider productivity, Revenue cycle financials, and Emergency room operations.

Measures productivity, clinical outcomes, and costs in one centralized place.

About ApexonHealth

ApexonHealth helps Providers, Payers, and other healthcare organizations harness the power of AI-technologies. This drives reduced costs, better cash flow, and increased customer satisfaction. ApexonHealth's Newton AI platform integrates machine learning, Robotic Process Automation, and Business Process Management. Solutions let customers modernize their back-office without the need for costly system integration.

Headquartered in Southfield, MI, ApexonHealth is the healthcare division of Technosoft Corp. The company has 14+ years of healthcare experience and 6 global delivery centers in the US and India. More than 80 healthcare organizations trust ApexonHealth. ApexonHealth is a member of HFMA, HBMA, AHIMA, AAHAM, AAPC, MGMA, AHIP and CISA. To learn more, visit Apexonhealth.com.
