

What Does Brain Health Have to Do with Intimacy?

Intimacy, Dementia, and the Brain

Monday, January 12, 2015, from 2:30—3:30

Topics include:

- ◆ *How understanding the brain can improve communication and intimacy*
- ◆ *Evidence-based neuroscience education on what happens in the brain when there is resonance and intimacy*
- ◆ *Tips to improve left/right brain integration*
- ◆ *Tips to respond to dementia and ISB (inappropriate sexual behavior)*

Heidi Crockett MSW, CMC, has ten years work experience in hospital and community case management and graduated with her Masters degree in Social Work from the University of Georgia. Currently, she is a Geriatric Care Manager with Aging Care Advocates. In this capacity, she advocates for seniors with an emphasis on prevention and healthy aging. She recently completed a post-graduate, sexual health certificate with the University of Michigan and frequently lectures on older adults and sexual health issues.
