Managing the Backbone of Collaborative Workflow

Agents perform vital functions for almost every application. As the backbone of collaborative workflow, agents interact with users, apply business rules and monitor specific events. Essential Agent Master is an agent monitoring and management application that collects detailed agent information on configuration settings and execution specifics, provides **notification of key agent failures**, and allows control of end-user created agents.

EAM has embedded awareness so you have instant availability status of, and the ability to collaborate with, agent owners and others with Essential Agent Master roles. EAM scans the server's log for agent-related errors. The user-defined search tool for agent errors in log.nsf allows administrators to skim the tremendous amount of information and precisely locate the information needed.

Reasons

Your Organization Needs Essential Agent Master

10. You don't have the time to check multiple places to figure out agent behavior
9. You need to identify agents that take forever to complete their task
8. You need to identify agents that run forever and don't complete their task
7. You need to identify agents that don't run at all
6. You have too many agents signed by ex-employees
5. You want to fix agents from the same screen where you learn they're not working
4. You need the flexibility to white list select agents and not have them report
3. You want to balance agent schedules for optimum infrastructure effectiveness
2. You want the ability to globally change end-user mail rules
1. You want to be alerted when critical server agent exceptions occur.

About Us

VitalSigns is the premier monitoring solution from RPR Wyatt, a USA based IT organization. For over eighteen years RPR Wyatt has created administration tools designed to enhance organizational collaboration, improve user experience, empower administrators, and lower operational IT costs. RPR Wyatt is a Microsoft and IBM Advanced Business Partner.
