

Position/Title: Lathe CNC Set-up Machinist

Experience: CNC Machining and Set Ups: 2 years

Reports to: CNC Manager

Company: Prototek

The CNC Set-up Machinist position at Prototek is a key role within our organization. We are seeking energetic, imaginative and creative individuals with robust skills in manufacturing, machining, hand tools and production processes accompanied by a genuine passion to learn. Your skills will be utilized within a fast growing and innovative shop environment. Prototek values individuals with creative and practical problem-solving skills and those who take pride in their work, we value accountability, integrity, mutual respect and collaboration.

This position reports directly to the CNC Manager and is a highly valued role driving our continued success. Responsibilities include:

- Read and interpret complicated blueprints.
- Prior experience with Mazak control helpful.
- Responsible for setting up complex set ups, machining parts and editing programs at the machine
- Individual would be responsible to help set up, prove out jobs and run small production runs
- Operates CNC machinery to perform machining operations on plastic pieces to specific specifications
- Responsible for maintaining quality and safety standards, housekeeping, process integrity,
- monitoring of calibration of all measuring equipment used and monitoring machinery and tools to ensure safe correct and optimum performance
- Install preset jobs and setup tooling, fixturing and machinery
- Verify the paperwork, print number, revision levels, operation sequence, materials, program and check sheet are all correct and consistent
- Run jobs in an efficient, organized and safe manner while following the work instructions on the print and/or work order sequence
- Maintain the workflow and perform quality audits as required to ensure that the product meets or exceeds the customer specifications
- Deburr parts following the work instructions on the work order sequence or on the print
- Change worn or broken tooling using appropriate procedures

Prototek is proud of its reputation as an organization that places customer service, consistent quality and on-time delivery as the cornerstone of our business. Prototek is defined by the following characteristics:

- Our machine shop is clean, well-organized, and climate controlled
- We are constantly re-investing in the highest quality machines
- We are a fast paced, dynamic manufacturing company that manufactures tight tolerance components out of various types of plastics
- Management encourages continuing education and job specific training programs
- Prototek is growing rapidly, but we are still a small and agile company and we encourage you to join us and grow with our winning team
- At all levels of the company we are encouraged to be flexible, forward thinking, inclusive, and take the time to enjoy the rewards of being the best and brightest in our market space

This position represents a great opportunity for individuals who are dedicated to the machining industry and are looking to advance their careers. We offer challenging work in a clean, professional, team environment.
