Tropical Biomedicine

POLICY STATEMENT ON CORRECTIONS AND RETRACTIONS

This document outlines the policy of Tropical Biomedicine (TB) on post-publication corrections and retraction of its peer-reviewed and published articles in line with the guidelines of the Committee on Publication Ethics (COPE). These amendments are made if the correctional factors are significant such that they affect either the publishing reputation of TB or the authors, or the scientific integrity or interpretation of the article. All cases will be addressed with an accompanying official notice that will be assigned a DOI and hyperlinked to the original article for preservation purpose.

Classification and definitions

Corrections

Author Correction
Corrections ascribed to a published article due to significant error(s) made by the author(s). Authors are not allowed to update, between acceptance and publication, the original data set(s) that has been peer-reviewed and became an integral part of the published article.

Publisher Correction
Corrections ascribed to a published article due to significant error(s) made by the editorial.

Retractions

A published article may be retracted or withdrawn from its issue when the integrity of the published content is substantially undermined due to either errors in the conduct, analysis and/or reporting of the study, or violation of TB Policy Statement of Ethical Publication.

The published article will be replaced with a Retraction Notice at the corresponding issue in the journal website. Retraction statements may include a statement of approval or disagreement by the authors. For record purpose, all authors of the article will be required to sign a Retraction Letter acknowledging the error(s) and retraction.
In the event of insolvable dispute by the authors, the editorial may seek advice from independent subject authorities and shall apply the most suitable type of amendment.

Addendum

An addendum is generally published when a substantial amount of either (i) important item(s), or (ii) information, or (iii) Author or Publisher error(s) vital to the understanding of the study was unintentionally overlooked during its publication. The addendum shall include the omitted item(s) or information or corrections, and will be published with the ID of the original publication marked on it. The addendum will be added to the corresponding issue of TB.

Decision-making methods and instruments

TB is committed to maintaining the integrity of its scientific publications. Concerns raised by authors, reviewers and/or readers will be carefully investigated. In the course of investigation, TB may request the authors to provide original unprocessed data, and consult with subject experts for their thoughts. Sufficient opportunity will be provided to the authors to respond to the concerns.

If the manuscript in question is being reviewed, it may be rejected and returned to the corresponding author. If the article has already been published and indexed, either an Addendum is published, or the article may be retracted depending on the profoundness of the case.

In instances supported by legitimate evidences or a judiciary decision, TB reserves the right to remove an article – either under review of published – that is deemed defamatory, infringes intellectual property right of a third party, or if the content, when practiced, poses an instant and/or severe health risks. A Retraction Notice will be appended in place of the withdrawn article.

Publication fee, if has been paid, shall not be refunded in the event of retraction of the manuscript by the editorial board or the author(s) at any stage of article processing after it is accepted for publication.
