

Core Competencies

P&M offers specialized integrated project delivery services and program controls as well as a full range of life cycle project and construction management services. Clients include owners, architects, engineers, and construction contractors. Our staff bring extensive background as a general contractor with expertise in alternative as well as traditional design-bid-build project delivery.

P&M has the capacity and expertise to successfully manage complex utilities and energy related capital improvement programs drawing from P&M's decades of collective experience managing programs with co-location of P&M staff with public agencies and organizations such as: Puget Sound Energy, Seattle Public Utilities and King County Wastewater division.

Professional Services:

- Professional cost estimating (conceptual & detailed)
- Planning, scheduling, and constructability reviews
- Total cost management and controls
- Risk workshop facilitations, risk assessments and stochastic analysis including contingency and management reserve analysis and quantification
- Value Engineering and Alternative Analysis (risk, cost and schedule analysis)
- Earned value management
- Claims analysis and change management
- Document controls, specification coordination and project administration

Differentiators

- Extensive real-world implementation of project risk identification, risk mitigation and project life cycle risk management.
- Integration of risk management into project planning and controls processes.
- Thorough knowledge of the unique complexity of planning, cost estimating and delivering Wastewater, Energy and Utility Projects.
- Extensive experience as the Lead estimator for the majority of major capital projects for King County Wastewater Treatment Division.
- Extensive experience providing project controls and schedule management of Energy and Utility projects.
- Majority of P&M consultants have extensive background as general contractors in the energy and power industries.
- Experience working with Owners project management platforms and augmenting with P&M specialized expertise and technology to provide flexible and scalable solutions as well as "outside the box" solutions.
- Providing integrated program management and construction management teams and systems to achieve customer stated project goals and to provide unique project solutions.
- P&M staff has multiple market sector experiences, enabling the application of industry best practices to benefit the program delivery.
- Fostering collaborative relationships by listening and learning about client needs and performing with utmost character and ethics. P&M staff keeps this at the forefront of their minds as they conduct their business with all stakeholders.
- Certifications in industries' best practices such as: Project Management Institute; Association for the Advancement of Cost Engineering; American Society of Professional Estimators; Risk Management Professionals; Information and Image Management.

Recent Representative Projects

King County North Mercer and Enatai Island Interceptors

P&M provides cost estimating and scheduling services. This includes development of construction cost estimates and design schedules for 30/60/90/100% design.

The challenges of the early design estimating on this project were the various types of conveyance routes being considered: land routes, direct bore routes, HD bore routes and lake bottom cut & cover routes.

The project replaces sewer pipes serving areas of North Mercer Island, Bellevue near Enatai Beach, and the Town of Beaux Arts Village.

Seattle Public Utilities Project Controls IDIQ Services

P&M provided project planning and controls on selected projects; develop Project Management Plans (PMP's); monitor and control on-going PMP's; support systems integration, enhancements, and process development; and project performance reporting. P&M won 2 subsequent contracts renewals.

Seattle Public Utilities Combined Sewer Overflow (CSO) Program Management

P&M provided integrated cost and scheduling management; independent cost estimate (ICE) reviews; improved cash flow planning and budget accuracy; and continuous process improvements efforts.

The program included planning, preliminary engineering, design, construction, and commissioning of CSO storage tanks, system retrofits and green infrastructure.

King County Georgetown Wet Weather Treatment Station

P&M provided cost estimating and scheduling. The estimating services included review of the planning level LTCP estimates and development of engineer's cost estimates from conceptual through final design while scheduling services included development and update of project and construction schedules at various design levels. The project entails comprehensive engineering and consulting for the design, environmental compliance, construction, permitting and commissioning of the wet weather treatment station.

SPU & King County West Ship Canal

P&M, as an Independent Cost Estimator (ICE), developed alternative conceptual cost estimates for three CSO underground tanks for comparison to the West Ship Canal CSO Tunnel project.

Our estimators performed independent cost estimate reviews of the engineer's estimate at 10% & 30% design stages.

King County WTD Project Controls IDIQ Services

P&M was initially selected in 2009 to provide project controls and cost engineering for various capital design and construction projects for WTD. P&M was again awarded the subsequent contract in 2010 for another 3 years.

Services included development/update of cost estimating guidelines and trending methodology; asset management estimating methodology and EVM tool; risk management procedures and risk assessment; independent development and review of cost estimates; CPM scheduling; and cost controls.

King County South Magnolia Combined Sewer Overflow

P&M provided Lead Cost Estimating and Scheduling services from options analysis through final design. Scheduling included development and update of project and construction schedules. The project involved design of a new CSO facility that includes a 1.5 million underground storage tank and a gravity sewer pipeline (3,000 ln. ft.) using Horizontal Directional Drilling (HDD) process.

King County West Point Oxygen Generation and Dissolution System (OGADS) & Liquid Controls Replacement

P&M provided lead cost estimating services from Options Analysis through Final Design for both projects. The OGADS project was to modify or replace the oxygen generation facility and the oxygen dissolution system, including the surface aerators, motors, and generators.

For the Controls replacement, the project entailed replacement of the West Section Plant Liquid Controls system with an Ovation SPCS (Supervisory Process Control System). The SPCS installation and commissioning included Electrical and Instrumentation & Controls.
