To Whom It May Concern:

My name is Anjana and I am a third-year student at Delhi University. I am currently pursuing a five-year Bachelor of degree in the field of Architecture, and I plan to follow up with a one-year master's degree after I graduate.

While in high school, I worked with my local Habitat for Humanity branch to help in building homes for moderate families. I learned about the construction process from the ground to up, and I also discovered the importance of function in architectural design. In my four years of volunteering, the homes which were built by us were never extravagant, but they served their purpose and became a beacon of hope for their owners.

My education was largely inspired by this mindset of function over form, stability over showmanship. I have enrolled in several classes for Architectural Engineering because I want to have a comprehensive view of how design meets structure and how designing can create happiness in humans. Under the tutelage of my architecture professor (Dr. Surendra Singh) my research and education accelerated. I was able to complete three extra-credit residential design projects.

I always wanted to become an architect who can create approachable, affordable housing opportunities in underprivileged communities. During my college days, I have seen countless rental properties available, but there were only a few homes for sale that were priced affordably enough for college students and first-time buyers. This case can be in many towns throughout America, especially in areas where there is a low standard of living. My target is to build sufficient starter homes that can help adults to build equity, avoid excessive debt, and create financial stability for their futures.

I have done an internship with LMNOP Architectural Firm in the summer vacation time period, and I will continue my on-the-job training there after my master's degree. After working under Government approved residential architects companies Ansal and Wave, I eager to open my own architectural firm focused on developing inexpensive, high-quality housing.

I appreciate your consideration. With your assistance, I can continue my schooling in architecture and design to bring a very approachable home to those needful people.

Sincerely,
Anjana Ahluwalia
