To Whom It May Concern:

It is my pleasure to strongly recommend M. Fadhil Budiman for any serious employer as a Senior Electrical Design Engineer/Project Coordinator for heavy industrial and construction projects.

I have worked with M. Fadhil on Ras Abu Fontas power and water desalination projects RAF-A2 and RAF-A3 in Doha, Qatar during the period 2015 – 2018. M. Fadhil was employed as electrical site engineer by the EPC Contractor Toyo-Thai Corporation Public Company Limited (TTCL) to carry out design, construction, commissioning and testing of the electrical power system for 2x36 million imperial gallons per day MSF and SWRO plants. M. Fadhil has shown excellent engineering design and execution capabilities of the projects' electrical works. M. Fadhil also showed great project management and coordination capabilities with good communication skills with his co-workers and other project team members.

M. Fadhil is indeed a hard worker engineer and possess the ability to work under extreme conditions with tight project schedule. I am absolutely confident that M. Fadhil would be great asset and will bring skills and experiences to his future employer. I wish him success endeavor.

Kind regards

Harry H. Istepanian
