

# QUEST

*The World's most rugged trailer*

Lake Brunner

Go further for longer on your next adventure with the Quest Bike Trailer.

Developed to withstand the roughest of journeys. The Quest Bike Trailer has been tried, tested and proven on some of the worlds harshest cycle tours from New Zealand to America, Afghanistan to Patagonia.

The Quest Bike Trailer is tough, built to go the places you want to go. Made from rotomoulded plastic (like a whitewater kayak), it is fully capable and guaranteed for off road use. Featuring a sprung rear wheel (undampened), stainless steel swing arm and tow hitch. No paint means no scratches.

- ▶ Low centre of gravity allowing you to ride as normal
- ▶ Streamlined design to follow your bike precisely
- ▶ 80L capacity with an external bungee system to maximise carrying capacity
- ▶ Easy to use, quick release mechanism
- ▶ Rugged design enabling fast downhill descents
- ▶ Transportable - Packed down the Quest Bike Trailer as suitable as airline check in luggage!

## Technical Specifications

### Capsule Dimensions:

73cm L x 41cm W x 30cm D

Assembled Length: 1250cm

Weight: 8kg

Compatible with pannier racks, different size wheels, full suspension & hard tail mountain bikes. Water resistant.

# QUEST

Trail blazing through the USA

The Quest Bike Trailer was born out of the stunning mountains of Arthurs Pass in the South Island of New Zealand.

*A true triumph of Kiwi ingenuity and a proven product to take you further for longer.*

An engineer and experienced outdoorsman, Chris Harrington, combined the two passions in his life; adventuring and creating. This combination sparked the development of the Quest Bike Trailer back in 2010. Several prototypes later he has now proven the Quest Bike Trailer himself throughout New Zealand, USA, Australia and Europe.

## Testimonials from Quest trailer travellers...

### Grum Frith – Quest trailer 10,000kms

*Gotta say it's wonderful. I was riding with a guy hauling (another trailer). He couldn't go more than 40kph downhill as it was too unstable. I'm tracking 60-70kph downhill, and it follows like a charm.*

### Susan Burslem – Quest trailer 1,500kms

*On the gravel roads of Patagonia, I didn't even know I was riding with a trailer most of the time. Fantastic!*

### Lindsay Gault – Quest trailer 12,000kms

*Riding down from above the Arctic Circle in Canada I had a three week supply load. 800 kilometres of rough gravel and only one real supply point (Fort McPherson). The Quest trailer was the key to survival on this ride. It tracked beautifully and carried the heavy stuff without excessive load on the bike frame. 12,000 kilometres later at the Atlantic it was still tracking without a single puncture. For a long haul ride like this, the Quest trailer is the way to go, rugged and solid engineering. Perfect on and off road.*
