

INDUSTRIAL SERVICES

CHEMICAL CLEANING

Our chemical cleaning process uses a special formulated process to remove various types of fouling material from tanks, process equipment and pipelines that may, if not removed, have a negative effect by reducing flow or decreasing efficiency in your systems.

VARNISH & MITIGATION

Prevent varnish related servo valve failures on hydraulic systems, small gas turbines and compressor lube oil applications. Also, extend the life of anti-oxidant additives & prevent premature oil replacements.

RECLAMATION & RECOVERY

Our reclamation programs allow you to salvage your "used oil and lubricants" and reuse it again. There is useful life left in this investment. If it is deemed to be healthy we can process this oil through our systems and supply it back to you for use in your operation again.

ENVIRONMENTAL PREVENTION

This service provides risk mitigation that promotes environmental observance, insurance compliance, and conformity to stand alone operating procedures. We maintain an excellent safety and EPA track record.

OUR SERVICES

LUBE OIL FLUSHING

A High Velocity cleaning process used with external pumps and equipment to rid vital equipment (system piping, heat exchangers, etc.) of harmful contamination. Services are performed during commissioning, turnarounds/outages, or after catastrophic failures.

RESERVOIR & TANK CLEANING

Our program offers Assessment, Tank Clean/Water Removal and Maintenance to prevent ruined equipment and loss of production. We clean system reservoirs from 5 gallons to 15,000 gallons. We also manage above ground and underground storage tanks.

FLUSHING & BLASTING

A Deionized Water Flushing process is utilized to ensure compatibility with normal operating fluid and to meet customer required specifications. Hydro-Blasting of high-pressure water is used to dislodge contaminants (i.e., rust) that are adhere to a surface.

ABOUT US

Allied Oil & Supply, Inc. has over 60-years of experience serving Transport, Consumer, and Industrial Businesses. Our team members are well versed in fluid contamination and plant processes.

*Emergency and planned services available,
24-hours per day/7 days a week until project completion.
