

WHEN YOU CAN RETURN TO SCHOOL

When you can be around others (end home isolation) depends on different factors for different situations. The CDC gives the following recommendations based on individual circumstances. For additional information, please visit <https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/end-home-isolation.html>

I think or know I had COVID-19, and I had symptoms

You can be with others after:

- At least 10 days since symptoms first appeared **and**
- At least 24 hours with no fever without fever-reducing medication **and**
- Symptoms have improved

Depending on your healthcare provider's advice and availability of testing, you might get tested to see if you still have COVID-19. If you are tested, you can be around others when you have no fever, respiratory symptoms have improved, and you receive two negative test results in a row, at least 24 hours apart.

I tested positive for COVID-19 but had no symptoms

If you continue to have no symptoms, you can be with others **after 10 days have passed since test.**

Depending on your healthcare provider's advice and availability of testing, you might get tested to see if you still have COVID-19. If you will be tested, you can be around others after you receive two negative test results in a row, at least 24 hours apart.

For anyone who has been around a person with COVID-19, it is important to remember that anyone who has close contact with someone with COVID-19 should stay home for 14 days after exposure based on the time it takes to develop illness.

If you have a weakened immune system (immunocompromised) due to a health condition or medication, please see the following:

People with conditions that weaken their immune system might need to stay home longer than 10 days. Talk to your healthcare provider for more information. If testing is available in your community, it may be recommended by your healthcare provider. You can be with others after you receive two negative test results in a row, at least 24 hours apart. If testing is not available in your area, your doctor should work with an infectious disease expert at your local health department to determine if you are likely to spread COVID-19 to others and need to stay home longer. More Information: <https://bit.ly/CDCHealthDept>
