

Brrrrrrr....

What's the Most Efficient Way to Create Additional Warmth?

- A *flat sheet* used on top of a *bath* or *spread blanket* retains more body heat and creates additional warmth.*

- *Flat sheets* weigh less and have a tighter weave than an additional *bath* or *spread blanket* and are, therefore, a better choice for enhanced patient care and decreased cost.

* Blankets that have been heated in a blanket warmer will also stay warm for a longer period of time with a flat sheet over them.
