

Rockshox Super Deluxe Coil Travel Reducer Removal

Tools required:

- Cutters like these

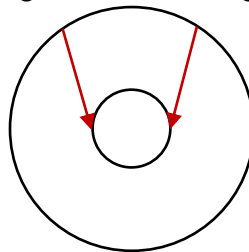

Steps:

1. Uninstall shock from frame.
2. Remove spring retainer and spring from shock. This will leave the shock looking like the image below. Note the travel reducing washer identified by the red arrow.

3. Slide the rubber bottom out bumper up to the top of the shaft to get it out of the way.
4. Using the cutters clip in 1/8 inch increments until the plastic travel reducer is cut through in the pattern shown in red below. Be careful not to touch the shaft on the last cut. The plastic will likely crack through before the cutters get to the inner edge.

5. Take the cut travel reducer off the shaft. There is a thin o-ring on the inside of the reducer to prevent it from rattling. Remove this as well. The shock will now look like the image below.

6. Reinstall spring and spring retainer and put shock back on bike.
