

Hazard, Risk & Control Assessment-Job Hazard Analysis

Information you need to know to identify hazards, assess risk and establish controls

Workshop Overview

"Hazard, Risk & Control Assessment is one of the most important programs/processes, if it fails; all other programs/processes are likely to be ineffective." ~John Wettstein

Job Hazard Analysis is the systematic examination of each step within the job, identifying all existing and potential loss exposures associated with the job, evaluating the risk of those hazards, and developing controls that will minimize the risk of those hazards.

This hands-on workshop will provide knowledge and skills for recognition of existing hazards, potential hazards, risk evaluation and controls to minimize risk, preventing injuries/loss to employees and their organization. Also, explained is what is Job Safety Analysis and guidelines to assist you performing your own step-by-step analysis.

One of the best ways to establish proper work procedures/practices is to conduct job hazard analysis.

This one-day workshop will assist your organization in meeting the requirements of the Alberta Occupational Health and Safety Code, Part 2 Hazard Assessment, Elimination and Control, as well as meeting the Alberta Partnerships in Health and Safety, Certificate of "Recognition" requirements.

Practicality is emphasized. You will leave this workshop with workable safety specifics you can apply immediately on and off the job.

What You Will Learn?

When you complete Hazard, Risk & Control Assessment-Job Hazard Analysis workshop, which is based on a participative approach, you will be able to:

- ✓ **Identify** existing and potential hazards
