

## Workshops Available

### Worksite Observations & Safety Conversations

Worksite Observations & Safety Conversations focuses on employee activities. Frequent observations and safety conversations (questions) will provide understanding on how workers make risk decisions. Worksite visits (Observation Program) will increase face-to-face interactions with employees, demonstrating visible safety leadership. *Are your worksite visits effective?*

### ½ Day-Hazard, Risk and Control Assessment

Hazard, Risk and Control Assessment is one of the most important elements in a Health and Safety Management System in that, if it fails; all other elements are likely to be ineffective. Part 2 of the AB OHS Code requires employees to assess a worksite and identify existing and potential hazards before the work begins. Employers must prepare a report that provides results of the assessment and specifies the methods that will be used to control or eliminate the hazards. *Have you identified existing or potential work site hazards?*

### Hazard, Risk and Control Assessment-Job Hazard Analysis

Hazard, Risk and Control Assessment is one of the most important elements in a Health and Safety Management System, while procedures/practices are an administrative control used to minimize risk. One of the best ways to establish proper procedures/practices to conduct Job Hazard Analysis. *Have you developed procedures and practices?*

### Incident/Near Hit Investigation

Incident investigation involves the systematic examination of an undesired event that did, or could result in unintended harm to people (injury/illness), property, and loss to process, environment or reputation. Investigation activities focus on determining causes and developing remedial actions to prevent re-occurrences. *Are your investigations preventing recurrences?*

### Supervisor Safety Skills

Front line supervisors set the tone for health and safety performance. They play an essential role in implementing your company's health and safety mandates. With their leadership, communication and coaching, health and safety requirements will be known and integrated into everyday activities supporting Risk Management. *Do your supervisors understand their roles and are they trained to perform their duties?*

### Others; custom designed as identified

If you require specific safety training, or one of our workshops require change to include copies of your company's policies, practices, procedures, forms, etc., please call us for customization. Safety training that links to a company's Health and Safety Management System's requirements will transfer from the classroom to the worksite with better retention for achieving competency and compliance. *Is your training appropriate?*
