Family Member:

OR

Guarantor name:

Address:

Phone:

Email:

Note: We are NOT offering FluMist this year as the manufacturer has not provided any data about the efficacy of that vaccine. We use a quadrivalent preservative-free flu vaccine (intramuscular shot) made by Sanofi, it is called Fluzone. If you have a history of allergy to eggs, you will need to be observed for 15 minutes after receiving your vaccine. Children under 9 years of age need to receive 2 doses at least 4 weeks apart the first time they get the flu vaccine. Pregnant and breastfeeding women may also receive the flu vaccine.

We are able to vaccinate parents and family members with military or PPO/POS insurance. We cannot vaccinate active duty family members.

Common vaccine reactions include soreness, swelling, redness, or warmth at the injection site lasting several days; fever; increased sleep or fatigue; fussiness; poor appetite. More serious reactions are possible. Vaccine Information Statements from the CDC are available on the front counter for your review. You may request a printed copy to take home as well if you like.

FOR STAFF:

If cash pay, was payment collected? Y N
Circle (check, cash, credit/debit)

Date: Sept 27, 2020 Oct 11, 2020
