## RSX Moves into New Facility Strong initial business prompted move to a larger facility

**Rancho Cucamonga, California** — Gloves and masks in place, movers have delivered RSX Technologies, Inc. to its new, larger, and fully climate-controlled facility.

“We couldn’t have chosen a more challenging time to move into our new facility”, said CEO and Chief Designer Roger Skoff, “but we are excited that it is now done. The new facility has a much larger production area and more office space to accommodate more staff and ongoing growth.” Skoff continued, “Although our move was made more difficult by the worldwide COVID-19 health threat, customer interest in our lines of High-End audio cables remains solid, and RSX needs to be ready for when the government-mandated shutdown period is behind us and the economy can return to normal.”

Boxes from the move have been quarantined in the company’s new climate-controlled facility for the past four days and will soon be unpacked. It is anticipated that operations will resume the first week of April under the strict manufacturing guidelines and health and safety protocols that were put in place prior to the move.

RSX cables are individually-crafted in the USA. That means the company has control over every step of the assembly process. Products are assembled in sanitized conditions and placed into safe packaging. None of our workers have tested positive for the coronavirus, but they wear masks and gloves and retain social distancing while on the shop floor. The front office is closed and all calls are coming in directly to managers. All emails are being read and responded to by managers.

Vice President Jim Arvanitis echoed Skoff’s comments. “It’s been a wild ride the past few months. The acceptance of our new cables and the growth we’ve experienced have been greatly encouraging, but also tempered by the unfortunate pandemic we are all facing”, said Arvanitis. “We remain confident that our business plan and unique products will drive our continued growth,” added Arvanitis.

The new facility is located at 10184 6th Street, Suite A in Rancho Cucamonga, CA. Additional information regarding our products can be found on the RSX website, [www.rsxtech.com](http://www.rsxtech.com).
