

Hear The Music...

Not The Cables!

The perfect cable would do nothing other than just carry signal from point "A" to point "B".

RSX cables do better "nothing" than any others!

All Cables Affect Your System's Sound

The cables that bring power to your system or carry signal through it are just as much "components" as are your amplifier, your speakers, or anything else. The greatest difference between them and your system's other components is that the others are there specifically to make changes to something and the cables are not.

Cables Shouldn't Change Anything

Other than to change location by bringing electricity (signal or electric power) from one place to another, cables have no necessary "change" function at all and, in fact, any change that they might make is always a change for the worse!

Doing Nothing Isn't Easy

Designing a cable is easy; any two conductors will do. Getting a cable to just carry signal and do nothing else is very difficult, and requires special knowledge, special skills, and very special materials. Those are the foundation of every RSX design. That's why RSX cables do better "nothing" than any others and why your system should rely on them as the truly passive interlink between you and your music.

You've invested a great deal of money and commitment in your other components and have a great deal of love for the music that they will play for you. Don't you want to hear them as they actually sound?

RSX Phono Cables

Phono cartridges can have outputs as little as just a fraction of a millivolt, and yet must be able to convey all of what's in the vinyl groove to the listener without loss, distortion, the addition of spurious signal artifacts or noise from environmental RFI/ EMI.

Cartridge performance is also strongly influenced by loading factors, both as provided as intended options by the phono preamp and as, possibly unintended capacitive and inductive reactance inherent to the design of the phono cable making the connection. That's why having a [phono cable](#) that will carry signal as nearly unchanged as possible is essential for your maximum listening enjoyment and why RSX phono cables offer better performance with each of three different price points.

Three Lines

RSX™ offers three lines of [phono cables](#), [PRIME™](#), [MAX™](#) and [BEYOND™](#). All are superb. As compared to other cables, they can be rated “Better”, “Much Better”, and “Best”, in that order.

RSX phono cables are available in 1 meter, 1.5 meter, and 2 meter lengths. RCA connectors are standard for all models. DIN connectors are available at an additional cost.

All RSX Phono Cable Features...

- Exclusive Balanced Field™ technology
- 100% long crystal, ultra pure Laboratory Grade copper.
- Multiple multi-wire conductor arrays.
- Teflon®-variant -plus- air dielectrics.
- Fully shielded and double grounded.
- Terminated with the very latest in ultra-low contact mass connectors, the principle for which was first developed and used by RSX's designer decades before any other cable manufacturer.

RSX AC Power Cords

Except for battery-powered equipment, every single bit of what you eventually hear coming out of your speakers must first have come out of the wall and been carried to your system by an AC power cord. This applies to all of your electronics, whether tube or solid-state.

All [RSX AC Power Cords](#) are fully “Faraday Cage” shielded to keep out external noise and to keep their own internally-generated electromagnetic field (one is formed wherever there is electrical current flow) from affecting the rest of your system. All RSX AC Power Cords are designed from a new understanding of how all pertinent factors integrate to affect the sound you hear and to maximize it for your ultimate enjoyment.

Three Lines

RSX™ offers three lines of [AC Power Cords](#), [PRIME™](#), [MAX™](#) and [BEYOND™](#). All are superb. As compared to other cables, they can be rated “Better”, “Much Better”, and “Best”, in that order.

RSX AC power cords are available as standard in 4, 6, 9, and 12 foot lengths with either NEMA (US) connectors. Schuko connectors are available upon request. Other lengths or connectors are available at extra cost. Contact us for details.

All RSX AC Power Cords Feature...

- Exclusive Demand Coupled™ design
- 100% long crystal, ultra-pure Laboratory Grade™ copper
- At least 3 times as much copper conductor material as conventional “heavy duty” power cords
- Multiple interleaved multi-wire conductor arrays
- Teflon®-variant+air fluoropolymer dielectrics
- Bi-metallic “Faraday Cage” shielded construction
- Specially designed high current AC connectors

RSX PRIME

"The entry level power cord in 4 foot lengths is only \$945.00. I got to listen some more and connect a whole system with RSX cables....I just cannot believe thisRSX also makes amazing phono cables. Very well shielded using some spooky good Teflon magic....DANG my Technics turntable sounded so FREAKIN expensive. BTW this was also just the entry level cable."

*Sunil Merchant
President at Sunny's Audio Video*

RSX™ PRIME™ Phono Cables open the doorway to better LP sound for any system. RSX PRIME phono cables sound better than any other phono cable at or near their price point and deliver outstanding performance with phono cartridges of any kind or output level.

RSX PRIME AC Power Cords are made of multiple individual connectors of ultra-pure Laboratory Grade™ copper. These are directly insulated with a premium Teflon™-variant fluoropolymer, bound together into RSX's proprietary Balanced Field™ geometry with Kevlar® fibers, and then "Faraday Cage" shielded with a bi-metallic braid over LDPE polyethylene

RSX MAX

RSX™ MAX™ Phono Cables are a step up from RSX PRIME, for even greater low-level detail, clarity, and freedom from coloration. Move up to RSX MAX for imaging, soundstaging, and ambience-retrieval unrivaled by any phono cable other than RSX's own BEYOND.

RSX's MAX AC Power Cords are the next step up from RSX PRIME™. With multiple ultra-pure Laboratory Grade™ individual conductors totaling 10+ AWG per conductor "leg", RSX MAX has nearly 5 times the metal of an ordinary "heavy duty" power cord to lower resistance and deliver more and cleaner power faster

"The qualitative difference that Roger Skoff's AMAZING power cords made was absolutely undeniable. The difference in sound quality was quite dramatic! The highs were more detailed and the stereo image felt dramatically wider. The mid-range sounded "deeper", sound-stage wise, and more focused. The lows had a more "physical", deeper quality. All in all, I don't want to record without using Roger's power cable."

Paul D. Carlsen
Multiple award-winning Producer/Recording Engineer

RSX BEYOND

"Fantastic, ultra quiet, effective grounding, top notch connectors, flexible, elegant fit and finish, realistic musical textures, powerful bass, extreme definition, superb imaging, dynamic punch without etch, stellar soundstage, rounded imaging, and more. Bravo Roger!"
(BEYOND Phono Cable)

Bob Levi
President and CEO, Los Angeles and Orange County Audio Society
Reviewer Positive Feedback Online

RSX™ BEYOND™ Phono Cables are the very best that designer, Roger Skoff, knows how to make. Given the limits of theory and present-day materials technology, they may very well be the very best phono cables possible, and, without significant new discovery, may remain the standard by which all others are judged for years to come.

RSX BEYOND AC Power Cords are an equally great achievement. Like the BEYOND phone cables, given the limits of theory and present-day materials technology, they too may well be the very best cables of their kind possible. Without significantly improved materials or increases in our knowledge of how things work, they may remain the standard by which all AC power cords are judged for years to come.

RSX POWER8

Cables aren't the only parts of your system that should do nothing at all to affect its sound. Sonic neutrality is also essential for power distribution and, if you're an audio "purist", the [RSX Power8™](#) multi-outlet power box is definitely what you need.

Power8™ has nothing — no on/off switch, no pilot light, no internal inductors or fuses, and no electronics of any kind (surge protection, filtration, "power conditioning", etc.) — to affect its own sound quality or that of anything it supplies power to; only supreme high-quality component parts, high-purity solid copper conductors, heavy-duty construction, and full Faraday Cage shielding to ensure years of trouble-free, service-free, and sonically neutral performance at a surprisingly modest price. With award-winning performance in either 110 or 220 Volt application, Power8™ is available in silver and in black anodized aluminum finishes and in 15A and 20A models, all with IEC inlet. Power boxes do not come with their own connection cable. Optional 3-space panels for equipment rack mounting are also available.

*"The Power Box is the equal of my two power conditioners costing \$3500 and \$7000."
"This is quite an achievement in this price category, or even at triple the price!"*

One Year • Seven Products • Five Top Awards

When we introduced our very first products at the end of 2019, we were pleased with our work and hoped that reviewers and audiophiles would be too. It didn't take long to find out: In just 45 days, our first review was published, and it was a "rave." Since then, we've increased our line to a total of seven products, all with the same underlying philosophy of: "Hear the music, not the cables" (Or, in the case of the Power8, "...not the AC Power Box"). That must be working because now, after just a single year in business, our products are in the homes of Hi-Fi enthusiasts and in the "reference" systems of reviewers everywhere, and five of our seven products have earned top performance awards – some more than once, with more soon to be on the way.

PF Writers' Choice Award 2020

Prestigious "Positive Feedback Online" Award given only to the best of the best High End audio products.

- **BEYOND™ Power Cord**
- **BEYOND™ Phono Cable**
- **Power8™ Outlet Box**

Brutus Awards 2020

Editor-in-Chief Dr. David W. Robinson's evaluated selections tested in his own listening room.

- **MAX™ Power Cord**
- **Power8™ Outlet Box**

Lifetime Warranty

Every RSX™ cable is warranted for life against manufacturing defects of any kind. This warranty is not exclusive to the original buyer, but may be transferred from one buyer to the next in perpetuity. This lifetime warranty applies only to defects incurred at the time of manufacture, and does not apply to normal wear-and-tear or to subsequent damage or failure as a result of misuse or mishandling. RSX cables contain no user serviceable parts. Any attempt to open the cable or its connectors will immediately void this warranty.

If your cable or other RSX product fails as a result of faulty materials or manufacture at any time, contact RSX at info@rsxtech.com for a return authorization and send the product back to us by prepaid carrier. RSX will determine, in its sole discretion, if the failure is under warranty and, if so, will repair it or replace it with a new cable of the same or a more current model of the same or better performance and send it back to you, delivery prepaid.
