This camp covers entrepreneurship, avionics, professional drone piloting and the many applications for drone technology.

## Meet 22-year-old CEO of Beagle Drones Valued at \$4 Million

Seeing is believing. **CampAVIATION** is committed to providing transformative opportunities for youth to envision themselves as aviators, engineers and innovators.

Meet 22-year-old aviator, aeronautical engineer, and entrepreneur Dwight Neptune. Four years ago, Neptune stumbled upon a market niche when it took him a month to build his own racing drone. His frustration ultimately led him to co-found Beagle Technologies, a company now valued at \$4 million. The company specializes in making modular “drone kits” that enable the average consumer to build a drone in 30 minutes. Beagle’s entire product line is designed for the drone racing community and STEM educational programs of all kind.

This camp is intended to prepare youth for the Federal Aviation Administration’s projections for drones. The FAA predicts within the next 4 years, one million drones per day will be flying in U.S. airspace at the same time engaged in tasks and activities such as package delivery, tree planting, construction, civil engineering, urban transit, healthcare administration, public safety, and so much more.

The goal of this program is to introduce youth to the fundamentals of drone technology. To that end, Neptune will share how drones are made, how they work, and how to become a licensed professional drone pilot starting at age 16.
