

# Primary Separation Cells

Fort McMurray, Alberta

Utilized pre-fabricated panels which were test fit in Supreme's assembly yard and transported to site.

Supreme Steel developed the procedure utilized for the pre assembly, transportation and site installation. This scope of work included 131,000 man hours of fitting/welding on internal bracing and transportation frames which in turn were utilized for welding platforms during final installation.

## Highlights

The execution strategy utilized pre-fabricated panels which were test fit and transported to site.
