Betreff: AW: Spain, Pool Accident, Mrs. Diya: Everything points to a electric shock

Sorry, my signature was missing.

And as I said, probably the first article on earth about an ELECTRIC SHOCK in the actual death pool case, was mine on the 26.12.2019, documented again today on the 01.01.2020 here

<https://logik-idee.com/2020/01/01/facts-about-pool-drain-accidents-and-pool-electric-accidents/>

Mit freundlichen Grüßen

Betreff: Spain, Pool Accident, Mrs. Diya: Everything points to a electric shock

Dear Mr. Toro and to all whom it may concern, especially Mrs. Olubunmi Diya,

you are the lawyer of Mrs. Olubunmi Diya in the actual Spanish death-pool case. To this day I want to say, it's not your fault, that nearly ALL were blinded like the whole world by the nonsense of "guardia civil".

<https://www.google.com/search?client=firefox-b-d&ei=rPIMXvmOF72Ek74P5p2rkA4&q=resort+employee...+also+struggled+to+get+out+suggested+a+problem+with+the+pool%E2%80%99s...drainage+systems%2C&oq=resort+employee...+also+struggled+to+get+out+suggested+a+problem+with+the+pool%E2%80%99s...drainage+systems>

No, never ever the facts suggested what the "guardia civil" interpreted, please understand my article:

<https://logik-idee.com/2020/01/01/facts-about-pool-drain-accidents-and-pool-electric-accidents/>

- Search everywhere, where on earth ever happened for technical reasons a pool accident with more than one dead person without it having anything to do with **electricity in the water ?**
- "Pool-drain" discussions when there are THREE death (two tall grown men) are as stupid as "*trying to oil the earth axis*". This shows **worldwide stupidity AND that criminal investigations are necessary**, because:
- The published statements of the experts **about "pool-drain themes" are under these circumstances homicidal incompetent or shall intentionally distract from the probability of an electric shock.**

Please regard my arguments and videos etc.

An electric shock is here MORE than a "possibility" and not saying this overwhelming probability open and loud, is in 2020 now more than a mistake.

Please contact also the experts for Electric Shock Drowning (ESD), also watch the videos

<https://www.google.com/search?client=firefox-b-d&q=Electric+Shock+Drowning+%28ESD%29>

I do not know them personally but their publications make sense as far as I saw it.

Sometimes experts coincide to hide the truth but I have no reason to think of this here

<https://www.electricshockdrowning.org/esd--faq.html>

They seem specialized for open water but it's the same in a pool: The source of the current in the water does not need to be very near to the spot of the accident and it

must not be a cable hanging in the pool, the electricity that kills in the pool, could have come from somewhere in the hotel building, from a pump in a technical area or a current conducting connection like water etc.. May be only at times when a filter or a pump is clogged or someone was working inside the house.

And especially check out my examples how in the case of Carmen Johnson helpers also got in trouble but survived the situation while the first victim was dying, exactly like the employee in the Diya case now. <https://logik-idee.com/2020/01/01/facts-about-pool-drain-accidents-and-pool-electric-accidents/>

And how in other cases like Turkey 2017 the 3 children AND the 2 helpers died, it absolutely depends on the specific amount of current in the water. And even I myself got electrocuted in a basin and can confirm my arguments by own physical experience, if its not too much current, you really don't understand whats going on in the first moment, it weakens your muscles and your heart but its NOT a "stroke" that warns you in the moment you enter the water.
