

SOLVENT ALTERNATIVE CLEANING LIST FOR AUTO BODY COLLISION

pacific northwest
POLLUTION PREVENTION
resource center

Background

The products contained in this list are products that can be safely used by auto body professionals as cleaning solvent alternatives. Every chemical (regardless of percentage) in this list is a Safer Choice-labeled product or a product found in TURI's *CleanerSolutions Database*. All chemicals in both databases are evaluated through a rigorous scientific process. Like all cleaning products, it is highly recommended that you read the SDS documentation prior to its use.

Any automotive collision repair shop providing paint stripping or surface coating can use the following information to reduce the potential of adverse environmental and/or health effects.

Paint stripping, coating, or spray materials with any of the following are considered toxic:

- Methylene chloride
- Chromium
- Lead
- Manganese
- Nickel
- Cadmium
