MY LOVE AFFAIR CONTINUES

I've written before about how much I love using Acid Magic for removing rust from sinks, toilets and showers. Well, I obviously have lots of iron in my well water—the latest evidence is that all our ground-level windows had a reddish tint from the sprinklers. I had no idea how to remove it until I thought of Acid Magic again. I brushed it on with a paintbrush and the rust instantly dissolved and ran down the glass.

If you have other mineral deposits in your water, I'm certain it'd take care of them, too. You can buy it by the gallon for about \$9 at Ace and some other hardware stores.
