

Electronics Engineering Technician

September 2021

Wenzel Associates in Austin, Texas is seeking a highly motivated and talented individual to join our team of engineers, designers and technicians who will create, launch and support an innovative product line of high performance crystal oscillators, systems and synthesizers based on Wenzel's world-class ultra-low phase noise technology.

JOB DESCRIPTION

Work on state-of-the-art oven-controlled crystal oscillators, RF and microwave components. Work with Electronic Engineers to conduct qualification and design verification testing of new and existing products. Perform electrical testing using automated test equipment and various types of test equipment including multimeters, frequency counters, and spectrum analyzers. Broadly responsible for testing, troubleshooting, repairing and modifying electronic circuits according to engineering instructions and customer specifications. Document and certify testing to military standards using approved acceptance test procedures. Work with little required supervision.

EDUCATION

Associates Degree or equivalent in relevant field preferred.

EXPERIENCE

5-7 years' experience in a manufacturing environment.

OTHER

Must have strong written and verbal communication skills. Ability to work independently and as part of a team. Must be detail-oriented and possess knowledge of manufacturing procedures and practices. Technical knowledge of electronic test and repair theories, principles, methods and techniques. Skill in interpreting drawings, schematics, and specifications.

The candidate must be a lawful permanent resident of the United States. In some cases he or she may be subject to a government security investigation in order to obtain a government security clearance.

Wenzel Associates is an Equal Opportunity Employer. Please send your resume to fran.crea@wenzel.com Electronics Engineering Technician
